Temp Control Mechanical – Portland, OR

Temp Control Mechanical's place as one of the Northwest's leading full service mechanical contractors has been the result of over 55 years experience, employees that believe in a "Proud Of Our Work!" culture, and a commitment to quality, value and safety. Founded in 1953, Temp-Control Mechanical, or TCM for short, continues to be locally owned and operated from its 60,000 sq. ft. headquarters in the Swan Island Industrial Park. This facility not only houses the corporate offices but also a 35,000 sq. ft. SMACNA approved sheet metal fabrication shop along with a pipe fabrication shop. Each is equipped with the latest tools and equipment and staffed by Local 16 and Local 290 union workers.

Temp Control Mechanical recognizes that pre-fabrication and pre-construction services provide a vital role in the success of a project. Not only do they reduce on-site labor costs and ensure product quality but they also can improve the overall safety of the project and allow flexibility to adapt quickly to changing project conditions. It is this dedication that focuses TCM on staying on the cutting edge of technology in order to ensure that all of the services it delivers are efficient, cost effective and provide a team approach from 3-D coordination drawings and BIM to LEED Standards and sustainability.

Safety is also a driving force at Temp Control Mechanical. TCM believes that a project cannot be called truly successful unless it is a safe project. The health and welfare of its employees is of utmost concern and is evident in the training the company provides. TCM not only employs on-staff Safety Professionals but has organized a Safety Leadership Committee to focus on the safety practices and education within its operation. They are proud of the fact that over forty of their Foremen have completed

the OSHA 30 training and for 2008 they received 2nd Place in SMACNA's national Safety Excellence Award Program for lowest injury/illness rate in their man-hour category.

TCM also believes in supporting our industry through leadership service. Jay Culbertson (CEO) serves on the Oregon State Mechanical Board and Ken Phillips (Vice President) is the Columbia Chapter's current Vice President & Treasurer.

Whether it is installing sheet metal in a hospital in Vancouver, a critical mission facility in The Dalles, LEED condo in downtown Portland, space museum in McMinnville, or providing pre-fabricated duct under its ROLOK sales division, Temp Control Mechanical is committed to remaining one of the Northwest's leading full service mechanical

Part of the ventilation system fabricated and installed by TCM at the OHSU Center for Health & Healing Building in South Waterfront.
